

Beekeeping Adventures

“What I learned as a UHH beekeeping student”

Entomology 262, Introduction to Beekeeping class, Fall 2010. University of Hawaii at Hilo Farm Laboratory. Panaewa, Hawaii. Photo by Grant Wilson.

For centuries, man has cultivated the honey bee for the many products that can be harvested from the hive and for their valuable pollination services. At the University of Hawaii at Hilo, there are two beekeeping courses that are offered to provide students the opportunity to gain knowledge about honey bees and practical beekeeping skills. They provide for your education and entertainment, information and skills with photos about their beekeeping experiences.
