ARTICLE THREE: SUSTAINABILITY

The UH-Hilo Student Association recognizes that in the absence of a substantial investment of resources and leadership by the university a continuing need exists to facilitate the development of student sustainability initiatives into institutionalized university policy. In recognition of this The Student Sustainability Committee was formed to accelerate the university's ability to provide for the needs of its current and future members without compromising the long term health and vitality of our biosphere and society.

To provide a framework that will assist decision makers in becoming a more sustainable society, the UH-Hilo Student Association recognizes and adopts 4 principles of sustainability that have also been proposed by the County of Hawaii.

These sustainability principles are....

1. Reduce and eventually eliminate our contribution to the progressive buildup of materials (such as fossil fuel and their associated wastes) that are extracted from the earth’s crust;

2. Reduce and eventually eliminate our contribution to the progressive buildup of synthetic materials produced by human society;

3. Reduce and eventually eliminate our contribution to the ongoing physical degradation of the earth; and

4. Reduce and eventually eliminate our contribution to conditions that undermine people’s ability to meet their basic needs;

The Student Sustainability Committee's primary mission is to identify activities or policies that violate the above principles and work to eliminate or reduce those transgressions. The committee’s projects will focus on making tangible and quantifiable changes within the university and community that will further advance its mission. An
underlining goal of the committee is to advocate for and obtain a substantial investment by the university to institutionalize the mission in the form of a funded UH-Hilo Office of Sustainability.
