

Assignment Guidelines

- Now that you have been introduced to the research literature related to cancer risk and cancer screening behaviors, you will expand your knowledge in a specific area by preparing a scholarly literature review paper, related to **ONE** of two topics:
 - reduce a cancer risk behavior

OR

- increase a cancer screening behavior.
- You may use one of your Journal Article Reviews as the starting point for your Literature Review. For example, if your selected Journal Article had been the sample article by Taylor et.al. (2010) titled *Evaluation of a cervical cancer control intervention using lay health workers for Vietnamese American women*, then you could conduct a review of the literature related to cervical cancer control interventions for Asian American women. **Please do NOT use this example for the focus of your Literature Review.**
- The introduction section of the journal article you selected (either for JA-1 or JA-2) includes a review of the literature related to the research question explored for the study. Therefore, the journal article is a good source of ideas and references for your Literature Review.
- Your Literature Review **MUST** address a topic related to either reducing cancer risk behaviors **OR** increasing cancer screening behaviors for a specific cancer type, and a specific target population. Your Literature Review may, but does not have to, be related to one of your Journal Article Reviews.
- The literature review paper will be **4-6 double-spaced typed pages** and must contain at least five citations of peer-reviewed journal articles.
- The paper must adhere to current APA Publication Guidelines.
